

EXACTO CORE®

ENABLING INTEGRATION
BETWEEN EXCEL AND SQL

INTRODUCTION

exacto core® is a technology which transforms processes and applications based on many Excel files into a solution resting on top of an SQL database using only a single Excel file.

FEATURES

- › Excel/SQL integration with a write back function
- › Automatic consolidation of data in a central database
- › Possibility for simultaneous users in the application
- › Compatible with all well-known BI and ERP systems
- › Comment function
- › Version control of data and scenarios
- › Process specific roles can be assigned to users
- › Flexible hierarchy on all master data
- › Change log / Audit log
- › User-friendly administration module
- › Built-in workflow function
- › Integrated error handling
- › Option to add GDPR compliance features

TECHNICAL SPECIFICATIONS

exacto core® is based on the two standard Microsoft products (PC version), Microsoft SQL-server and Microsoft Office.

exacto core® is compatible with Microsoft SQL server 2012, Microsoft Office 2016 and later versions.

exacto core® functions on both on-premise and Cloud based SQL-server, including Microsoft Azure.

Security is based on Microsoft AD.
